

Expertise for Your Next Geothermal Project

Geothermal power is particularly attractive as a renewable energy source, but targets are often deep, making their discovery challenging. There are a several ways to deal with these issues with the Magnetotelluric (MT) method resulting in remarkable success in geothermal fields globally.

Complete MT Solutions Inc. is a group of leading scientists with more than 100 combined years of experience in MT investigations and in Geothermal Exploration. Our scientists are leaders in the community and intimately knowledgeable of the optimal means of finding resources whether in high enthalpy hot zones (volcanic) or in low enthalpy sedimentary basins (HSA: Hot Sedimentary Aquifers) or granites (EGS: Enhanced Geothermal Systems).

About Magnetotellurics (MT)

The MT method takes advantage of naturally flowing currents in the subsurface. These currents and their associated magnetic fields can be measured at carefully selected sites and related to the underlying ground structure and geothermal targets. It is a precise business and one in which Complete MT Solutions is particularly skilled and qualified.

Choosing an MT Supplier for Your Project

There are many good reasons to choose Complete MT Solutions for your next project. Our experts have worked on large and small projects, including a major research project in Europe. Moreover, we are skilled in planning, acquiring, processing, analyzing, modelling/inverting and interpreting data to show lateral and vertical changes in electrical Geothermal properties. And at client request, we offer the distinct ability to design and specially optimize deployments and frequencies of acquisition to maximise resolution and minimise cost. No other companies offer this with the same level of competency.

Experience, versatility, and the best equipment and minds in Geothermal Exploration. That's part of the Complete MT Solutions' equation -- and the other part is your project. If you have a project that demands rigorous attention and stunning results, contact Complete MT Solutions. We think globally and survey there too! Contact us now for more information and to obtain a complementary survey design plan.
